

Hemorrhoids Summary

www.ListenToYourGut.com

Many people with inflammatory bowel disease (IBD) and irritable bowel syndrome (IBS) suffer from internal or external hemorrhoids. Hemorrhoids (also called piles) are inflamed, swollen veins and tissue in the rectum or anal canal. If they occur in the rectum, (the end of the large intestine leading to the anus), they are called internal hemorrhoids. If they occur in the anal canal (the opening of the anus), they are external hemorrhoids.

Constipation is the main cause of hemorrhoids, although loose bowels, being overweight, pregnancy and labor can also play a role. You can have both internal and external piles at the same time. While painful and troublesome, piles are not considered serious.

Symptoms of and treatment for hemorrhoids depend on whether they are internal or external piles. Common hemorrhoid symptoms are itching, rectal pain, blood in the stool and, less frequently, painful lumps near the anus. Occasionally, a hemorrhoid can protrude outside of the anus. Up to 20% of individuals with hemorrhoids also experience anal fissures (tears).

There are effective substances you can use to shrink hemorrhoids (like bioflavonoids), but you have to keep taking them, and they don't always heal hemorrhoids completely. Dr. Jonathon V. Wright is a respected medical doctor who uses natural remedies whenever possible. He has invented successful protocols for using potassium iodide (SSKI) to treat various ailments from internal and external hemorrhoids to ovarian cysts.

Jini Patel Thompson took his hemorrhoid formula and “turbocharged” it by adding DMSO (dimethyl sulfoxide - a natural substance derived from tree bark). She shared her formulas for both internal and external hemorrhoids with her LTYG Wellness Circle members for further testing, and they too enjoyed positive results.

As with all holistic healing, your success with this remedy will also depend on whether you are also addressing the root hemorrhoid causes in your body. If you are eating a diet that results in hard, dehydrated stools or decreased muscular contractions of the intestine, then, while HemorrHeal may heal your first hemorrhoids, continually straining to have a bowel movement is just going to produce more.

Because of current FDA regulations around DMSO, Jini can't get HemorrHeal manufactured for you. She can only give you the hemorrhoid remedy formula, and you have to buy the four ingredients (DMSO, aloe vera juice, potassium iodide and cocoa butter) to make it yourself. Be sure to use stool softeners like psyllium, chia, flaxseed or MetaCleanse during HemorrHeal treatment, especially if you suffer from constipation.

DMSO nonselectively opens up your tissues to take up whatever is in their environment, so you have to be very careful about what you store it in (must be dark-colored glass); any instruments you use to apply it, and what's on your fingers and on your skin when applying it. Be sure to follow [Jini's HemorrHeal formula](#) instructions carefully, and to use the hemorrhoid treatment exactly as she describes.
